Aria Venting Window Handle the opposing tongue fastener

Fixing Instructions

1

Remove window fastener cover

2

Positioning fastener

Position fastener at desired location making sure that tongue has full engagement with the window frame as well as having enough clearance between the fastener base and the window frame; this will prevent the base clipping the frame when being opened.

3

Mark position

Turn handle approximately 30 degrees and using a black marker (or alternative tool) mark positions that holes are to be drilled. Now drill holes to suit screws using a 3.5mm drill bit (if replacing a handle, the existing holes should be sufficient).

Attach fastener

Using a square drive screwdriver attach the fastener to the sash using the two screws supplied.

Completing installation

Replace handle cover and check functionality of the handle and engagement of the tongue on the window frame.

10
YEAR
WARRANTY

The warranty covers manufacturing defects, standard finishes but excludes plated finishes or finishes exposed to a corrosive environment. The warranty excludes damage caused by installation contrary to written instructions and incidental or consequential damage. We recommend regular cleaning with mild detergent.
